## **DETAILED ACTION**

The examiner acknowledges the amendment filed January 5, 2007.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

**Claims 1-9 are rejected under 35 U.S.C. 102() as being anticipated by U.S. Patent No. 6,315,719 to Rode et al. cited by Applicant in the IDS (hereinafter Rode).**

Claims 1-9 have been rejected on substantially the same basis.

### ***Response to Arguments***

Applicant's arguments filed January 5, 2007 have been fully considered but they are not persuasive.

The applicant argues the applied prior art neither shows nor suggests a control unit (body transceiver) capable of being actuated, a specific feature of the instant invention designed to reduce the power consumption. The examiner disagrees.

First, in response to applicant's argument that "a control unit capable of being actuated", a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.

However, even if the recitation is positively recited it is still rejected because the prior art reference specifically discloses the aforementioned limitation. In column 2, lines 30-66, the prior art states, "the system according to the invention comprises at least one autonomous sensor unit including a sensor and a pair of transmit/receive electrodes that are adapted to be arranged on the skin or body surface of the subject, a central transmitting and receiving unit which is adapted to be arranged on the body of the subject, and a portable data recording unit. The transmit/receive electrodes of each autonomous sensor unit are adapted to transmit the acquired sensor data into the body of the subject, so that these sensor data are transmitted via the skin and/or other body tissues of the subject to the central transmitting and receiving unit." This disclosure is sufficient to reject the claimed invention.

***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
